Yeshan Qiu

Tel: +65 8038 5367 | Email: E0788063@u.nus.edu | yeshan.qiu@sec.ethz.ch

EDUCATION

National University of Singapore (NUS), Singapore 01/2022–2026
PhD in Architecture
Thesis submitted and successfully defended; degree conferral pending administrative processing, expected October 2026.
Dissertation: Understanding Impact of Urban Patterns on Urban Avian Biodiversity: Comparative Studies Across Cities

Shanghai Jiao Tong University (SJTU), Shanghai, China 09/2018–03/2021
Master's Degree in Landscape Architecture
Dissertation: Construction and Design Application of Bayesian Model of Public Ecological Aesthetic Perception in Urban Green Space Based on Deep Learning

Hainan University (HNU), Haikou, China 09/2014–06/2018
Bachelor's Degree in Landscape Architecture
Overall GPA: 3.82/4.0 | Ranking: 1/136

RESEARCH INTERESTS

- Urban biodiversity, avian ecology, and biodiversity modelling
- Climate change impacts, climate × land-use interactions, and cross-city comparative ecology
- Urban landscape patterns, 3D vegetation structure, and pattern–process relationships

PUBLICATIONS

Manuscripts under review / in development

RESEARCH EXPERIENCE

Comparative Ecology of Cities: Understanding Patterns, Processes and Properties of Cities to Improve Urban Conditions 03/2023–Present

Future Cities Lab Global, NUS, ETH Zurich | *PhD Researcher*

• Contributed to a collaborative, multi-module project examining urban pattern–process–function relationships across cities, linking settlement patterns with biodiversity, climate and energy, hydrology, public health, and socioeconomic outcomes.

• Independently led the biodiversity module through a cross-city comparative study of 68 global cities, integrating citizen-science species occurrence records, biodiversity observation data, and spatial pattern metrics into modelling-ready datasets to assess relationships between urban spatial patterns and biodiversity responses.

• Conducted multi-source, multi-city urban pattern metrics analysis, integrating land-use/land-cover data, urban spatial layers, landscape metrics, and 3D urban/vegetation structure indicators.

• Analysed how landscape distribution, composition, configuration, and three-dimensional structure shape biodiversity responses, with implications for planning practices, ecological networks, and nature-based solutions.

Collaborative Urban Bird Modelling Projects with NParks 07/2024–Present

Wildlife Management Research, National Parks Board, Singapore | *Researcher*

• Collaborated with NParks' Wildlife Management Research team on applied avian biodiversity modelling projects, including the Decadal Study of Birds in Singapore and straw-headed bulbul population modelling.

• Integrated bird survey data with Landsat-derived land-cover layers, LiDAR-derived vegetation structure metrics, ETH green canopy data, and multi-scale landscape metrics.

• Generated modelling-ready spatial predictors from transect buffers, survey points, and prediction grids, including landscape composition, configuration, canopy connectivity, patch structure, total edge, core area, and percentage cover metrics.

• Supported long-term urban bird community analysis and straw-headed bulbul abundance/population modelling for management-oriented biodiversity assessment and urban wildlife planning.

Public Risk Perception, Behaviour Patterns and Public Emotional Guidance under Major Public Health Emergencies 03/2020–2023

National Natural Science Youth Fund Project | *Researcher*

• Analysed the impact and potential role of urban green space on public health events and public health.

• Concluded that group pressure and psychological restoration of elderly residents in the community were strongly correlated with green-space rate and green-view measures.

Synergistic Research on Street Species and High-Quality Road Greening in Shanghai 11/2019–09/2020

Shanghai Science and Technology Commission | *Team Leader*

• Responsible for the evaluation of benefits of urban street greening in Shanghai using AI deep learning skills.

• Assisted in optimization of ecological design, including increasing the plant landscape (after evaluation) by 23.2%, seasonal colour richness of plant landscape by 33.67%, and overall green space utilization by 8%.

• Led 6 team members to implement preliminary investigations and assessments of ecological road environments.

• Designed a natural plant community pattern in urban road green space across the Jing'an district of Shanghai and independently produced a research report.

• Utilised ecological natural plant-community modes to replace traditional geometric and regular plant communities in road green spaces to improve ecological stability and increase biodiversity.

Survey of Shanghai Urban Landscape and Style: Artificial Intelligence and Big Data 03/2019–11/2020

National Natural Science Youth Fund Project | *Research Assistant*

• Interviewed 86 households face-to-face to investigate public perception of urban landscape aesthetics, using deep learning, street data, and eye-tracking technology.

• Analysed street-view data with Python to explore 238 road landscapes in downtown Shanghai.

• Set up a street-view sample database to conduct eye-movement experiments on 57 local residents in Shanghai and tracked saccades, gazes, glances, and other physiological indicators individually.

• Built an aesthetic cognition Bayesian model using deep learning to expand limited aesthetic survey samples, aiming to construct a rapid and large-scale survey of public aesthetic preferences.

• Published research outputs in *Chinese Landscape Architecture*.

PROFESSIONAL EXPERIENCE

Dawson Landscape Design Co., Ltd. 01/2018–08/2018

Landscape Designer Assistant

• Participated in preliminary analysis of the status quo in beautiful village revitalization construction planning and design projects in Haikou city.

• Independently designed Ding'an Community Park planning projects within two weeks and produced the first and final floor plans, which were adopted by clients.

• Collected data on site history, topography, precipitation, sunlight, and animal and plant biodiversity for the Magnolia Tianxiang Farm design project and produced relevant floor plans.

• Performed modelling analysis by combining GIS and Rhino.

• Simulated seasonal light, wind direction, and wind speed before selecting suitable habitats for plants and crops with different environmental requirements.

• Took full responsibility for the municipal square landscape design in Ding'an City, including site investigation and analysis, floor-plan design, and preparation of the design proposal.

SELECTED HONOURS & AWARDS

• Best Student Oral Presentation Award, TDWG 2026 Annual Conference, Oslo, Norway — 09/2026

• First Prize, Academic Scholarship, Shanghai Jiao Tong University — 10/2020

• Second Prize, Academic Scholarship, Shanghai Jiao Tong University — 10/2019

• Third Prize, National University Landscape Garden Design Competition, CHSLA — 10/2019

• National Academic Scholarship (Top 1%) — 11/2017

• Third Prize, National University Student Environmental Ecological Science and Technology Innovation Competition (Top 3%) — 09/2017

• Outstanding Graduate Student, Shanghai Jiao Tong University — 03/2021

• Outstanding Graduate Student, Hainan University — 2015–2017

ACADEMIC SKILLS

• *Ecological and biodiversity modelling*: biodiversity modelling, ecological response modelling, avian occurrence analysis, and ecosystem service assessment.

• *Geospatial analysis*: GIS, raster/vector processing, land-use/land-cover analysis, landscape metrics, LiDAR-derived vegetation metrics, and multi-source geospatial data integration.

• *Programming and statistical tools*: R, Python, MATLAB, Netica; statistical modelling, Bayesian modelling, reproducible workflows, and data visualisation.

• *Design and experimental tools:* Adobe Photoshop, Adobe Illustrator, SketchUp, Lumion, WUFI, Tobii eye-tracking equipment, and physiological-response data collection.

TEACHING & LEADERSHIP

• *Guest lecturer on urban biodiversity*, Master of Landscape Architecture programme, National University of Singapore — 2026.

• *Teaching Assistant for Academic Writing*, Integrity and Ethics and Landscape Garden Graduation Design — 09/2018–08/2020.

• *Leader*, Bulgarian Rural Research and Planning Practice Project, SJTU Global Challenge Program — 05/2019–08/2019.
